

***Draw shear and moment diagrams to solve problems!**

- Homework 5: 6-3, 6-5, 6-15, 6-61, 6-68, 6-71, 6-87

6-3.

Draw the shear and moment diagrams for the beam

6-5.

Draw the shear and moment diagrams for the beam

6–15.

Members ABC and BD of the counter chair are rigidly connected at B and the smooth collar at D is allowed to move freely along the vertical post. Draw the shear and moment diagrams for member ABC .

6–61.

The beam is subjected to a moment of $15 \text{ kip} \cdot \text{ft}$. Determine the percentage of this moment that is resisted by the web D of the beam.

*6–68.

The shaft is supported by smooth journal bearings at A and B that only exert vertical reactions on the shaft. Determine its smallest diameter d if the allowable bending stress is $\sigma_{\text{allow}} = 180 \text{ MPa}$.

6–71.

The boat has a weight of 2300 lb and a center of gravity at G . If it rests on the trailer at the smooth contact A and can be considered pinned at B , determine the absolute maximum bending stress developed in the main strut of the trailer which is pinned at C . Consider the strut to be a box-beam having the dimensions shown.

6–87.

The beam has a rectangular cross section with $b = 4 \text{ in.}$ Determine the largest maximum intensity w_0 of the triangular distributed load that can be supported if the allowable bending stress is $\sigma_{\text{allow}} = 1.40 \text{ ksi}$.
